

Problem Statement: We will create an app that can accurately show you what you look like after a haircut. Using AI technology, the app will prevent people from getting haircuts that they will regret in the future. This app will also lead you to the nearest and top rated barber shops as well as personal barbers.

Who is experiencing the problem?: There are people all over the world who make the mistake of getting a haircut that they regret.

What is the problem?: The problem is that people decide to make these decisions about their appearance without actually knowing what they look like after.

Where does the problem present itself?: The problem will present itself when someone decides to get a specific hairstyle, before the hairstyle they will use the app to see if they hairstyle actually looks good on them.

Why does it matter?: it matters because it practices the use of artificial intelligence as well as giving everyday people a solution to a problem they may run into. People will stop getting haircuts they regret and they will be able to try out different hairstyles, prior to the risk of actually physically changing it.
